Submitted (FEB-1996) to the EMBL/GenBank/DDBJ databases.
Submitted (FEB-1996) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Could be involved in cytadherence.
-!- SUBCELLULAR LOCATION: Type I membrane protein (Probable).
-!- SIMILARITY: Belongs to the adhesin Pl family.
-!- CAUTION: Ref. 4 sequence differs from that shown due to a frameshift in position 159 to 213.
                                                                                                         Q49379; Q49437; Q53351;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 18,

Patti JM; Lantz M, Han N, Lepine G, Tumwasorn S, WPI; 1996-287181/29. Progulske-Fox A, N-PSDB; AAT30647. Porphyromonas gingivalis genes and proteins - used in the detection and vaccination against periodontal disease.

Claim 4; Page 110-112; 153pp; English.

HArep3 (AAR96023) is the product of the HArep3 repeat unit (AAT30647) of the hagA gene (AAT30654) of P. gingivalis 318. It forms part of haemagglutinin hagA (see also AAR96030). HArep3 and other hagA repeat unit products (see also AAR96021-22 and AAR96024) can be obtd. from transformed host cells and used as vaccines to protect humans or animals against periodontal disease. Expression in Salmonella cells allows product of live vaccine. HArep1-4 can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise OS field)

HArep2 (AAR86022) is the product of the HArep2 repeat unit (AAT30646) of the hag4 gene (AAT30654) of P. gingivalis 318. It forms part of haemagglutinin hag4 (see also AAR96030). HArep2 and other hag4 repeat unit products (see also AAR96021 and AAR96023-24) can be obtd. from transformed host cells and used as vaccines to protect humans or animals against periodontal disease. Expression in Salmonella cells allows prodn. of live vaccine. HArep1-4 can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise OS field)

This sequence represents the hagA haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as
